

PICTE-HIV

PROGRAM INFECTION CONTROL
TROUGH EDUCATION

ERAMUS+ PROJECT 2018/2019

WHAT IT IS

PICTE-HIV is a project coordinated by AWISHE (Association for World Innovation in Science and Health Education, Portugal) that aims to develop a sex educational program focused on HIV/AIDS prevention destined to children, youth, teachers and health professionals.

PICTE-HIV Program

The program is organized in 10 sessions covering 3 themes

1

THEME I. Approach to Sexual and Reproductive Education

- a) Sexual and Gender Identity
- b) Sexual and Reproductive Health - The Importance of Hygiene;

2

THEME II. HIV - Human Immunodeficiency Virus

- a) General characteristics of the virus
- b) Viral (and HIV) Replication
- c) HIV transmission routes
- d) World History and Distribution
- e) Prevention - HIV and other Sexually Transmitted Infections
- f) HIV diagnosis
- g) Treatment in HIV infection;

3

THEME III. Practical issues of program implementation and training guide handling.

PICTE-HIV GOALS

The project aims to

Implement a sex education program focused on HIV/AIDS prevention, and create a manual of good practice for educators and practitioners working on these issues.

Contribute to the development of the quality of educational practices in the field of sex education.

Increase the availability of educators and health professionals to the importance of sex education in a preventive logic.

Increase the knowledge of young people about infectious diseases, promoting healthy behaviors and attitudes.

Promote cooperation between different entities from different countries in different areas of intervention (NGOs, public agencies, companies)

Mazowiecki

Number of professionals: 3

Number of students: 82

Turkey

BASOGRETMEN ATATURK ILKOKULU, ÇORUM

Number of professionals: 3

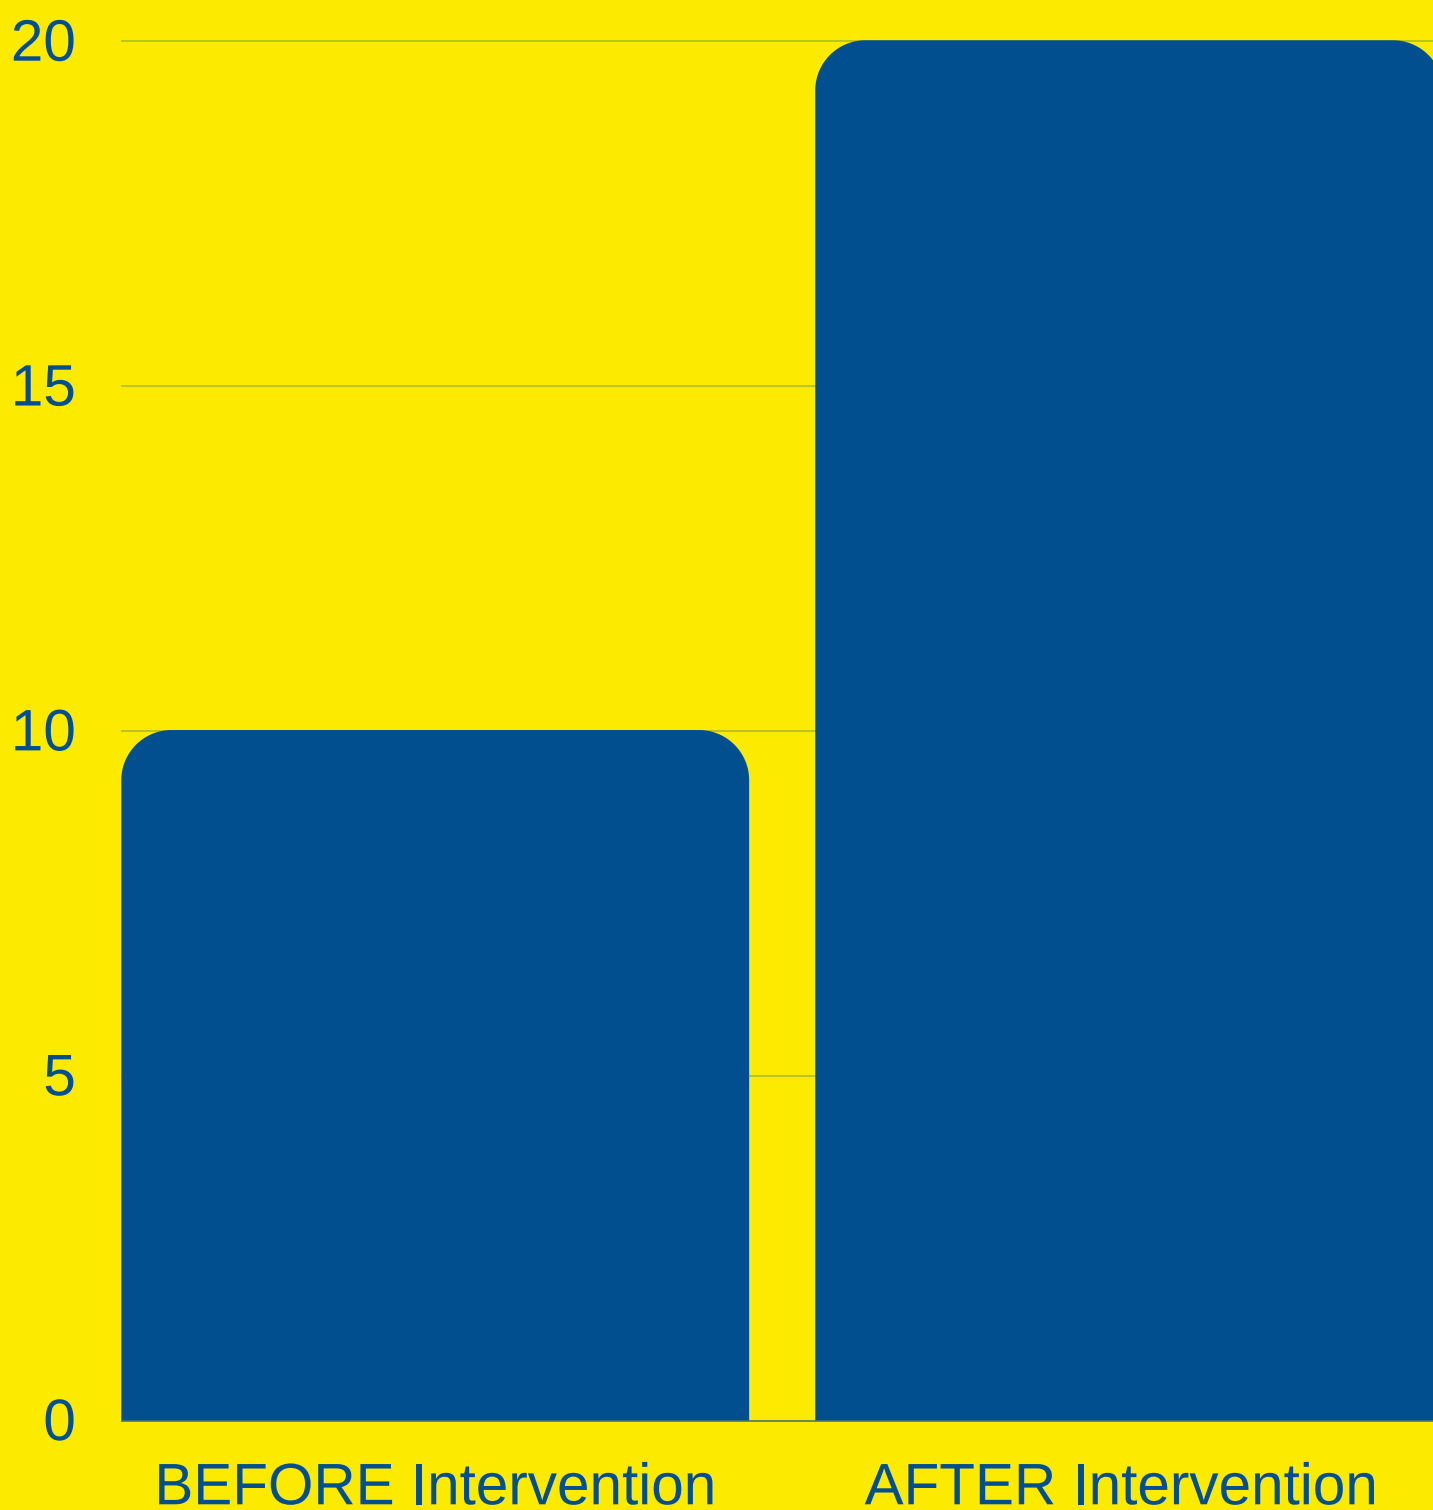

Number of students: 54

Evaluation

To assess the impact of the intervention on students' scores on HIV informations, a global knowledge questionnaire was applied before and after the intervention, as well as 10 questionnaires, before and after the sessions. After data collection, data were entered and analyzed using the Statistical Package for Social Sciences (SPSS), version 22.

Results

Results demonstrate statistically significant differences between pre-intervention and post-intervention. There was a statistically significant increases in scores from Time 1 (M = 40.36, SD = 2.29) to Time 2 (M = 8.83, SD = 1.85), $t(303) = -28.18, p < .0005$ (two-tailed).

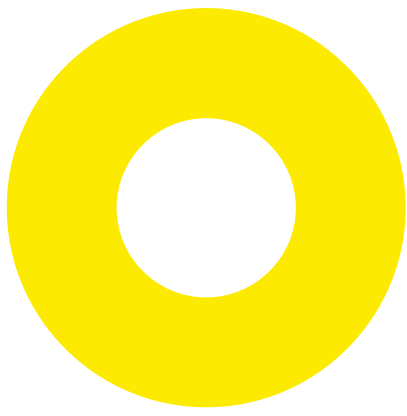

PICTE-HIV

CONCLUSIONS

We can conclude that the program had impact in younger by promoting the knowledge about HIV, in order to make responsible choices about their sexual and social relations; to acquire healthy attitudes and behaviors, enabling young people to make responsible and safe choices; to reducing future involvement in risk behaviors;
